CSS Selectors

CSS selector selects the HTML element(s) to style.

- Element Selector
- Class Selector
- ID selector
- Universal Selector
- Grouping Selector

Element Selector

Selects HTML elements based on the element name
Ex : HTML tag name (h1, p, form, body & html etc..)

```css
1   h1 {color: white;}
```
element.css

Class Selector

Class selector selects HTML elements with a specific class attribute.

- To select class need to (. dot) character, then add a class name

```css
.center {
    text-align: center;
    color: red;
}
```

Here

- .center : class name

- text-align & color : css property

- red & center : css values

ID Selector

ID selector uses the Id attributes to select specific element

- id of an element is unique within a page
- To select specific id need to add (# hash) character, then id of the element.

```css
#para1 {
    color: red;
}
```
idSelect.css

Here

- #para1 : id value

- color : css property

- red : css values

Universal Selector

The universal selector (*) selects all HTML elements on the page.

```css
* {
    text-align: center;
    color: blue;
}
```

Here

- * : Universal Selector (*)

- color & text-align : css property

- blue & center : css values

- Basically it is uses for complete web page elements for marging, padding & font family and more

Gouping Selector

Grouping selector selects all the HTML elements with the same style definitions

- To group selectors, separate each selector with a comma.

```css
h1, h2, p {
    text-align: center;
    color: red;
}
```
Grouping.css

Here

- h1, h2, h3 : Grouping html element

- color & text-align : css property

- red & center : css values
